

If you have Long COVID, you may be able to join a research study.

What is Long COVID?

Long COVID is when a person is sick months after getting COVID. Symptoms can include trouble breathing, a cough, feeling weak and tired, and problems with certain organs, such as the heart or kidneys.

What is the study about?

RECOVER-VITAL is studying a possible treatment for people who have Long COVID. We want to learn if a study drug can reduce ongoing symptoms from the virus that causes COVID.

With your help, we can better understand why and how Long COVID affects people in different ways.

Am I a good fit for the study?

- You are an adult who had COVID
- You do not have an active COVID infection
- You still have 1 or more of these symptoms:
 - Exhaustion or low energy that interferes with daily activities
 - Trouble thinking clearly or brain fog
 - Dizziness, fast heart rate, shortness of breath, upset stomach, or other changes in body functions that happen automatically

Viral persistence and reactivation,
and immune dysregulation

No health insurance
is required.

trials.recovercovid.org/vital

What can I expect if I decide to take part?

Your participation should last about 6 months.

You would be paid for your time.

Your personal health information collected during the study will be kept confidential.

What will I be asked to do as a participant?

Visit the clinic at least 4 times

Take a study drug, provided at no cost

Complete testing, including lab tests, physical ability tests, and/or brain function tests

Answer surveys online or by phone

Contact the study team to find out if RECOVER-VITAL is right for you.
